## FABULOUS NEWS.....

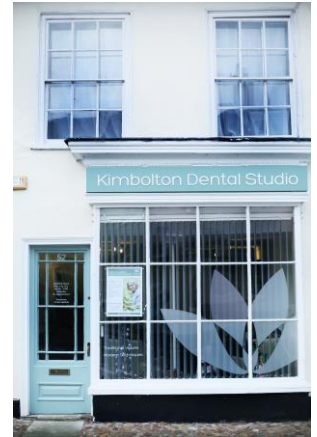

**We are very excited to announce that our surgery is about to undergo a full refurbishment!**

Over the next few months work will begin to completely update the dental surgery.

This work will be carried out over two phases. The initial renovations will take place in April and the practice will be closed from **Friday 29<sup>th</sup> March until Monday 16<sup>th</sup> April**. Firstly the delightful woodchip walls will be stripped and the ceiling dismantled, then both made good and electrics and lighting replaced.

During the summer we will be closed from **Monday 6<sup>th</sup> August until Monday 20<sup>th</sup> August** for the remaining work to be completed, including new flooring, new cabinetry, updated equipment and a new dental chair!

We hope the ongoing work will not cause too much inconvenience to our patients and you will all appreciate the modernisation we will achieve in the near future.

## Making an Impression – A Huge Advance in Dental Technology

One of the main things that patients mention they dislike about dental treatments is impressions, the material doesn't feel very nice and can be quite messy. With this in mind we are delighted to announce that we will be introducing an intraoral scanner which will eliminate the need for impressions.

There are so many treatments that this can be used with when normally impressions would be needed; crowns, bridges and veneers, orthodontic treatment & study models, the creation of tooth whitening trays and night guards and sports mouth guards.

The intraoral scanner works by taking a digital image and delivers a quick, accurate picture of the treatment area. This is completely painless, mess free, completed in seconds and not always necessary to scan the whole mouth. The digital file is then sent to the laboratory for the fabrication of the crown/restoration.

The intraoral scanner will create high quality digital impressions to evaluate treatment and improve patient understanding of possible treatments.

**We are sure you will be thrilled with the ease and efficiency of this new technology**

## Add Some Shine This Spring

Tooth Whitening is a very popular cosmetic treatment which can provide a huge boost to your confidence.

Unfortunately as we get older our teeth get darker. Certain foods such as tea, coffee and red wine, smoking, trauma to teeth and some antibiotics taken during tooth formation can also cause discolouration. Whitening can make them lighter again, bringing back that younger brighter smile!

Did you know that only dentists, dental therapists, dental hygienists and dental technicians working to the prescription of a dentist can legally perform tooth whitening?

Anyone else offering whitening such as beauticians etc. won't have the right training and knowledge, could permanently damage your teeth and gums and can't help you if something goes wrong!

We can restore the sparkle to your smile with Philips Day White home whitening system. To find out more, please call Kate & Emma on reception or ask at your next appointment.

This service is also available to non-patients of the practice so please pass on the news to your friends and family.

Here's a couple of before and after photos of smile makeovers recently carried out at our practice:

## Perfect Smile

With millions of selfies being posted on social media every week, more and more people are looking at cosmetic dentistry to improve their smile.

With the advancement in dental techniques it's easier than ever to achieve this. If there is anything about your teeth that stops you smiling, have a chat with your dentist to find out how we can help.

**We ♥ feedback!**

We would love to hear about your experience at Kimbolton Dental Studio. You can let us know if you think we're doing a good job or if there is anything we can do better. We are always looking to improve our services and your opinions matter.

Please visit our Facebook page and leave us a review.
